Verify/repair finished permissions on disk disk0s3 A>‡vb

Disk: "A>‡vb"

The System Symbolic Link Files were found to be damaged and could not be repaired. The damaged system symbolic link files are listed below.

Location: "Desktop"

Folder: "tmp"

This folder pointed to by a System Symbolic Link File is missing.

Location: "A>‡vb/private/"

Explanations:

System Symbolic Link Files: These are files used by the operating system that are similar to aliases. If these files are damaged it may prevent startup or cause system instability.
