

LaTeX Error

Font T1/cmr/m/n/12=ecrm1200 at 12.0pt not loadable: Metric (TFM) file not fou
`\fontencoding\encodingdefault\selectfont`

I wasn't able to read the size data for this font,
so I will ignore the font specification.
[Wizards can fix TFM files using TFtoPL/PLtoTF.]
You might try inserting a different font spec;
e.g., type `\font<same font id>=<substitute
font name>`'.
